IMPORTANT

Fit shutter (whatever the type) comprises a curtain, rails and a balancer.

The curtain slides in the rails and the dimensions to take into account are the ones which give its position.

It is then necessary to supply us with the most precise dimensions. The ones defining dimensions for the manufacturing of the door and the others allowing to check its good working order.

MANUFACTURING

WOA : **Width Over Angles** corresponds to the interior width of the vehicle for a rear shutter. (the thickness of the angles is included)

IH : **Inside : Inside Height (to sill)** measured from sill to under roof

OH : **Opening Height**, measured from sill to bottom of header

OPERATION

OW : **Opening width** measured between posts

H : **Headroom** measured from under the roof sticks : between 170 mm and 240 mm
